Amendments To The Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

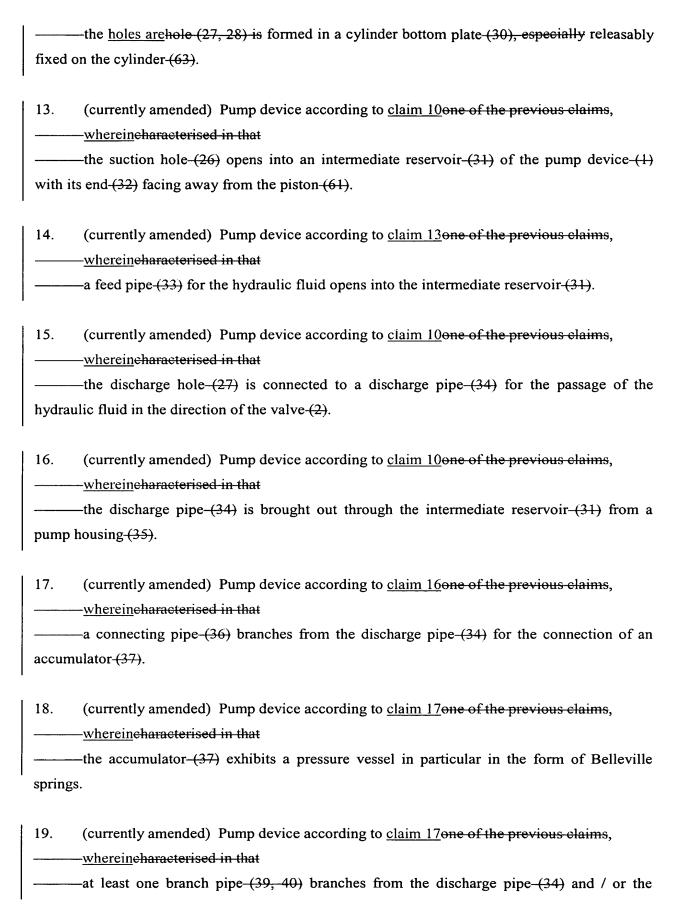

Listing of Claims:

1. (currently amended) Pump device (1) for the hydraulic actuation of a valve—(2), in
particular for a valve used in the production of crude oil or natural gas, such as a safety valve
assigned to a pipeline or a tree, the pump device comprising:
with a piston-cylinder unit (3) from which hydraulic fluid (4) can be pumped in the
direction of the valve (2)-under pressure; and
Characterised-in-that
an electrical drive device (5) is-movably connected to the piston (61) of the piston-
cylinder unit (3)-for itsthe alternating movement of the piston in athe piston longitudinal direction
(62) inside the cylinder-(63).
2. (currently amended) Pump device according to claim 1,
whereincharacterised in that
———the electrical drive device (5) exhibits includes a spindle drive (6), a reduction gear (7), a
spur gear-(8) and at least one drive shaft-(21) with at least one electric motor-(9) rotating the drive
shaftit.
3. (currently amended) Pump device according to claim 1-or-2,
3. (currently amended) Pump device according to claim 1-or-2,
——— <u>wherein</u> eharacterised in that
 — whereineharacterised in that — the spindle drive (6) exhibits includes a rotatable, but axially immovable spindle nut (10)
 — whereineharacterised in that — the spindle drive (6) exhibits includes a rotatable, but axially immovable spindle nut (10)
——whereineharacterised in that ——the spindle drive (6) exhibits includes a rotatable, but axially immovable spindle nut—(10) and an axially movable threaded spindle—(11).
 whereineharacterised in that the spindle drive (6) exhibits includes a rotatable, but axially immovable spindle nut (10) and an axially movable threaded spindle (11). 4. (currently amended) Pump device according to claim 1 one of the previous claims,
 whereineharaeterised in that the spindle drive (6) exhibits includes a rotatable, but axially immovable spindle nut (10) and an axially movable threaded spindle (11). (currently amended) Pump device according to claim 1 one of the previous claims, whereineharaeterised in that
 — whereineharaeterised in that — the spindle drive (6) exhibits includes a rotatable, but axially immovable spindle nut (10) and an axially movable threaded spindle (11). 4. (currently amended) Pump device according to claim 1 one of the previous claims, — whereineharaeterised in that — the threaded spindle (11) is releasably connected at its actuating end (12) to the piston
 — whereineharaeterised in that — the spindle drive (6) exhibits includes a rotatable, but axially immovable spindle nut (10) and an axially movable threaded spindle (11). 4. (currently amended) Pump device according to claim 1 one of the previous claims, — whereineharaeterised in that — the threaded spindle (11) is releasably connected at its actuating end (12) to the piston
 whereincharacterised in that the spindle drive (6) exhibitsincludes a rotatable, but axially immovable spindle nut-(10) and an axially movable threaded spindle (11). (currently amended) Pump device according to claim 1 one of the previous claims, whereincharacterised in that the threaded spindle-(11) is releasably connected at its actuating end-(12) to the piston (61).
 whereineharacterised in that the spindle drive (6) exhibits includes a rotatable, but axially immovable spindle nut (10) and an axially movable threaded spindle (11). (currently amended) Pump device according to claim 1 one of the previous claims, whereineharacterised in that the threaded spindle (11) is releasably connected at its actuating end (12) to the piston (61). (currently amended) Pump device according to claim 1 one of the previous claims,

6. (currently amended) Pump device according to claim 39 one of the previous claims,
———— <u>whereineharacterised in that</u>
the spindle nut-(10) is rotationally rigidly connected to a flexible, cup-shaped toother
sleeve-(14) of the harmonic drive gear-(13).
7. (currently amended) Pump device according to <u>claim 6 one of the previous claims</u> ,
———— <u>whereincharacterised in that</u>
a rotating sleeve-(15), which is rotationally rigidly connected at one end-(16) to the
toothed sleeve-(14) and at its other end-(17) to the spindle nut-(10), is arranged between the
toothed sleeve-(15) and the spindle nut-(10).
8. (currently amended) Pump device according to claim 39one of the previous claims,
——————————————————————————————————————
————a wave generator-(18) of the harmonic drive gear-(13) is rotationally rigidly connected
a first spur wheel (19) of athe especially helically toothed spur gear (8) and, whereby a secon
spur wheel (20) is rotationally rigidly arranged on the drive shaft (21) driven by the motor.
open when (21) is recommend ingress standard on the drive share (21) driven by the motor.
9. (currently amended) Pump device according to claim 8 one of the previous claims,
whereincharacterised in that
——————————————————————————————————————
10. (currently amended) Pump device according to claim 1 one of the previous claims,
whereincharacterised in that
———the piston-(61) is adjustably supported in a piston chamber-(23) of the cylinder-(63) in the
piston longitudinal direction-(62), whereby the piston chamber-(23) exhibits on its face side-(23)
at least one suction and one discharge hole (26, 27).
11. (currently amended) Pump device according to claim 10 one of the previous claims,
———whereineharacterised in that
each hole (26, 27) is assigned a non-return valve (28, 29), which is subjected to a force
opposite to the hydraulic fluid flow direction through the respective hole (27, 28).
12. (currently amended) Pump device according to <u>claim 1 one of the previous claims</u> ,
———whereineharacterised in that

5

165897.01/1600.13500

20. (currently amended) Pump device according to claim 19 one of the previous claims,
——— <u>whereincharacterised in that</u>
———a first branch pipe (39) leads to a pressure switch (41).
21. (currently amended) Pump device according to claim 20 one of the previous claims,
——— <u>whereineharacterised in that</u>
——on reaching a predetermined hydraulic fluid pressure in the first branch pipe, (39) the
pressure switch-(41) outputs an electrical control signal for opening a safety valve-(42).
22. (currently amended) Pump device according to claim 21 one of the previous claims,
whereineharacterised in that
———the safety valve (42) is arranged in a second branch pipe (40).
23. (currently amended) Pump device according to <u>claim 21</u> one of the previous claims,
———— <u>whereineharacterised in that</u>
————the safety valve (42) is formed as a mechanically actuatable non-return valve (43).
24. (currently amended) Pump device according to <u>claim 21one of the previous claims</u> ,
whereincharacterised in that
——the electrical control signal can be transferred to an electric servomotor (44), in particular
a stepper motor, through which the safety valve-(42) can be mechanically actuated.
25. (currently amended) Pump device according to <u>claim 24one of the previous claims</u> ,
——— <u>whereincharacterised in that</u>
———a pinion—(45) is drive-connected to the servomotor—(44), the said—pinion—(45) being
rotationally connected to a cam disc-(46), whereby an actuating plunger-(47) of the safety valve
(42) is in contact with the cam disc-(46).
26. (currently amended) Pump device according to <u>claim 25one of the previous claims</u> ,
whereineharacterised in that
————the cam disc (46) exhibits includes at least an actuating cam (48) along its circumference.

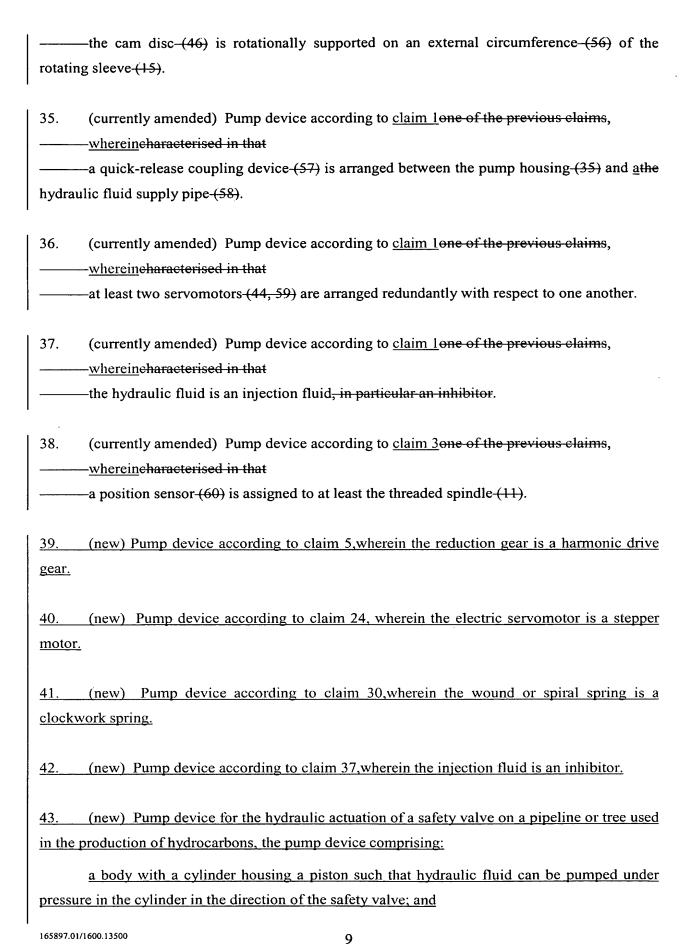

(currently amended) Pump device according to claim 25 one of the previous claims,

165897.01/1600.13500 7

27.

discharge hole (27).

———whereincharacterised in that
———the actuating plunger-(47) is a roller plunger-(49), which with its roller-(50) is in rolling
contact with a circumferential surface-(51) of the cam disc-(46).
28. (currently amended) Pump device according to <u>claim 27one of the previous claims</u> ,
——— <u>wherein</u> eharacterised in that
————the roller plunger—(49) is subject to spring pressure in the direction of the cam disc (46).
29. (currently amended) Pump device according to <u>claim 25one of the previous claims</u> ,
———whereineharacterised in that
————the cam disc-(46) and / or the servomotor-(44) is assigned an automatic reverse rotation
device (52) for the reverse rotation of the cam disc (46) .
20 (aumently amonded). Prome device according to along 20 and of the mucrious eleman
30. (currently amended) Pump device according to <u>claim 29 one of the previous claims</u> ,
whereincharacterised in that
———a wound or spiral spring (53), similar to a clockwork spring, is assigned to the servomotor
(44) as a reverse rotation device (52), which can be transferred by actuation of the servomotor for
opening the safety valve (42) from anits essentially destressed state into a stressed state.
31. (currently amended) Pump device according to <u>claim 30</u> one of the previous claims ,
——— <u>wherein</u> eharacterised in that
———the wound / spiral spring-(53) is drive connected on the rear side-(54) of the servomotor
(44) facing away from the pinion-(45) to the servomotor.
32. (currently amended) Pump device according to <u>claim 13one of the previous claims</u> ,
———whereineharacterised in that
————a feedback pipe (55) for the feedback of the hydraulic fluid when the safety valve (42) is
open runs from the safety valve to the intermediate reservoir (31).
33. (currently amended) Pump device according to <u>claim 1 one of the previous claims</u> ,
———— <u>wherein</u> eharacterised in that
——————————————————————————————————————
34. (currently amended) Pump device according to <u>claim 25one of the previous claims</u> ,
——————————————————————————————————————

an electrical drive device movably connected to the piston of the piston to move the piston in a longitudinal direction inside the cylinder upon the hydrocarbons reaching a predetermined pressure.
